Volume 1 Issue 2

Campbell Estate - Chevron - Hawaiian Electric - Kalaeloa Partners - Tesoro - AES - The Gas Company - Marisco - Oahu Gas Service - BEI Hawaii - Hawaiian Cement

Big business? Small Business? In-between? What ever!! Emergencies have a way of happening to any and all. You need to know how you will respond, if/when!!

Big Plan? Small Plan? In-between? Really depends on your vulnerabilities! Think about the bad things that could happen - make a list - plan according to your capabilities.

Actions to get you started? Here are a few - there are more in your C.L.E.A.N. Emergency Resources Guide (The Guide):
>Appoint a Facility Emergency Coordinator >Identify your types of emergencies >Learn about your neighbor's hazards >Know how to report emergencies >Use checklists in The Guide >Educate you-and-yours on emergency procedures >Conduct emergency drills >Post emergency numbers at all telephones >Alert your neighbors if possible >Identify property, and keep records safe >Obtain emergency supplies, keep them in good condition and accessible >Plan an escape route, and an alternate (consider shelter-in-place) >In case of an emergency, act promptly - "Over response" is generally preferable to "under response".

**Do You Know
procedures in The Guide for notifying 911?**

Hazardous materials (HazMat) are chemical substances, which, if released or misused, can pose a threat to the environment or health. HazMat identified in Campbell Industrial Park include explosives, flammable and combustible substances, poisons, and radioactive materials.

Facility Emergency
Coordinators are people who know about their companies' operations, and are designated to serve during an emergency. Their functions typically include, but are not limited to:

- >Representing the company in emergencies
- >Developing procedures
- >Submitting reports
- >Making assessments of emergency situations
- >Notifying responders, and others in the emergency area.
- >Initiating evacuations or shelter-in-place as needed
- >Providing information to emergency responders

Check 'Em Out !!!

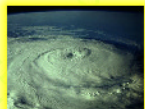

Your copy of the C.L.E.A.N. Emergency Resources Guide includes a treasury of Emergency Action Checklists - for emergencies that might happen in the Campbell Industrial Park Community. Look for checklists on such emergencies as:

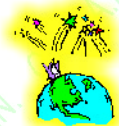

Hazardous Materials (HazMat) Incidents - Know what to do: when preparing for an incident; during an incident; and after an incident!

Fires - In Campbell Industrial Park, fires can involve a wide range of hazardous and non-hazardous materials!

Hurricanes - Also known as tropical cyclones, hurricanes have winds reaching sustained speeds of 74 miles per hour or more, blowing around a relatively calm center, the "eye"!

Earthquakes - Sudden motions of the earth's surface cause tsunamis, floods, landslides; and can trigger fires, explosions, and hazmat incidents.

Tsunamis - Series of traveling ocean waves generated by disturbances like earthquakes, landslides or volcanism can cause fires, explosions and hazmat incidents.

Floods - The most common and widespread of all natural disasters except fire, floods damage roadways, bridges, buildings, harbors, and communications systems.

Facility Security Threats - Ranging from loss of property from theft or malicious acts to life safety of employees and the public, security threats and incidents fill today's news.

And, while in the Emergency Resources Guide, be sure to look for:

Information on: The Emergency Survival Kit; The Shelter-In-Place Survival Kit; the Pet Survival Kit; Water Storage; Emergency Outdoor Water Sources; Water Purification Methods; and Guidelines For Pet Owners !!
